

Understanding and addressing network and host vulnerabilities is an essential element of strong information security. Network penetration testing goes beyond the actual discovery of vulnerabilities, and into the work of actively exploiting vulnerabilities with real-world attack techniques – to see if your IT assets, data, humans, and/or physical security can be compromised.

**With Frontline Pen Test™, Digital Defense can impose a skilled and experienced team of testers against your network defenses to:**

- » Determine the viability of select attack vectors
- » Identify high risk vulnerabilities hidden amongst a well sequenced attack against a set of lower-risk vulnerabilities
- » Identify vulnerabilities that are difficult or impossible to detect with vulnerability scanning
- » Assess the business impact of successful attacks
- » Test the ability of your security team to detect and respond to attacks
- » Provide quantifiable support for increased investments in security personnel and technology
- » Improve compliance posture, e.g., PCI DSS – which requires both annual and ongoing penetration testing

**Digital Defense provides a multi-phased, in-depth pen test process:**

Digital Defense offers its industry leading vulnerability management solution in powerful and cost-effective subscriptions:

FRONTLINE Advanced™	FRONTLINE Pro™	FRONTLINE PCI-Pro™	FRONTLINE WAS Advanced™

VM™

## Smarter. Faster. More Accurate.

Frontline Vulnerability Manager™ (Frontline VM™) is the industry's most comprehensive, accurate, user-friendly vulnerability management software – bar none.

Awarded a 5-star rating and Best Buy Designation by SC Magazine, Frontline VM puts security innovation at your fingertips, leveraging the Frontline.Cloud advanced technology to simplify vulnerability management through easy to use features.

### Frontline VM key features include:

- » Dynamic dashboard, data analysis and reconciliation
- » Automated asset classification, risk prioritization and remediation assignment
- » Concise, actionable intelligence with step by step instructions on how to quickly fix vulnerabilities
- » Authorized user access from any location
- » Customized user permissions and rules
- » Workflow management with assignment tracking system
- » Trending and labeling notifications, highlighting unmitigated vulnerabilities and new asset discoveries
- » Frontline Security GPA®, a clear, easy to understand rating of your organization's security posture

## Frontline.Cloud Now residing in AWS!

At Digital Defense, our proven, industry-recognized solutions have been leveraged by clients since 1999.

We're native to the cloud, and through the evolution of our technology and market demand, our Frontline.Cloud platform continues to provide organizations with a robust, yet easy to deploy VM solution that can be trusted to deliver unparalleled results, while lifting the administrative burden associated with premise and hybrid solutions.

## Get Your Head in the Cloud:

- » Avoid the cost, startup time, and complexity associated with hybrid environments and multiple management consoles
- » Automate the time-intensive process of VPC connection setup and maintenance – where non-native cloud solutions force a manual process
- » Easily address VAVM needs in a GDPR-compliant manner
- » Benefit from patented technology that was named Best Scan Engine by Frost & Sullivan
  - Low asset abrasion - gentler to devices and networks
  - Cross-context auditing for more thorough assessment of network assets
  - Scan large networks quickly without abandoned or incomplete results
  - No pre-knowledge of network configuration needed – our intelligent scanner does the hard work
  - Backed by a team of experts including highly credentialed security analysts, vulnerability researchers and client advocates with 24/7 support available

WAS™

## Quick. Comprehensive. Accurate.

At Digital Defense, we know the importance of optimizing the time and resources to ensure your information security program is performing and protecting your environment. But what about your web applications?

Frontline Web Application Scanning™ (Frontline WAS™) has been developed to provide the highest level of dynamic web application testing results through a system that is easily deployed and maintained.

### Frontline WAS provides:

- » Unparalleled accuracy with minimal consumption of resources
- » Easy deployment and configuration
- » High-level dashboards at the scan level and a per web application to easily expose overall security postures at various levels
- » “Blind Spot” coverage commonly missed by other web application assessment technologies
- » Prioritization of the most critical vulnerabilities, saving organizations valuable resources through targeted remediation efforts
- » Tracking of and trending on new, recurred and fixed vulnerabilities
- » Intuitive results navigation
- » Active view - web application scan data management across all web application scan activities
- » Robust filtering - providing the data and views you want instantly
- » Dynamic reporting / visualization
- » Security GPA® trending that offers a dynamic view of your security posture
- » Detailed reporting to address OWASP Top 10
- » Ability to compare Frontline VM and WAS Assets Ratings automatically, with no manual intervention required
- » ...and more!

## Seamlessly integrate with Complementary Security Technologies

Frontline Connect™, a RESTful API for intelligent security data exchange, integrates seamlessly with security workflow management platforms and SIEMs.
