

Identify Your Highest Threat Exposure

Focus your team's efforts on remediation that truly reduces risk.

WHY IT'S IMPORTANT:

- ▶ Organizations cannot afford to waste resources remediating every detected vulnerability.
- ▶ Threat analysis and exploitability assessment prioritize vulnerabilities with the highest risk, so IT teams can operate efficiently.

ROADBLOCKS:

- ▶ Standard scoring systems (CVSS, CVE, CWE, etc.) don't reflect actual risk.
- ▶ Resource shortages prevent teams from performing proper threat assessment.

SOLUTION:

- ▶ Severity-based prioritization that leverages threat intelligence and machine learning.
- ▶ Prioritization based on exploits observed in the wild in addition to severity.
